## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10 and 12-16, drawn to a process for detecting or quantifying non-covalent interactions between a target protein and one of its ligands and a kit, classified in class 536, subclass 23.4.
- II. Claim 11, drawn to a process for identifying or quantifying interactions between a receptor and a non-fluorescent molecule, classified in class 435, subclass 7.1.

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are different methods. The methods of Groups I and II comprise steps which are not required for or present in the methods of the other groups. For example, the method in Group II requires an agonist that triggers a signal transduction pathway and an antagonist that inhibits the signal transduction pathway. In Group I, a response transduction function is not modified. Thus, the operation, function and effects of these different methods are different and distinct from each other. A search of one would not be co-extensive with a search of the other and hence would be burdensome.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
